

1 **ABSTRACT OF THE DISCLOSURE**

2 A case for tool shafts has a housing with an opening and an entrance,
3 a sliding member slidably mounted on the housing, a top cap covering the
4 opening, a bottom cap covering the entrance and an optional suspension plate.
5 The multiple tool shafts are movably accommodated inside the housing in
6 parallel and pushed to the opening by the sliding member. Thereby, the
7 multiple tool shafts are arranged inside the case in an orderly manner. An
8 individual tool shaft can be positioned at the opening by the sliding member
9 removed conveniently from the housing through the opening.
